Experience

F5 Networks Bengaluru, India

Software Engineer 2 (Devops) *October 2024 – Present*

- Automated microservice architecture deployments by developing robust **Go templates** for microservice architecture hosted on kubernetes.
- Hardened platform security infrastructure to guarantee strict **FIPS compliance** and accelerating SaaS FedRAMP certification readiness.
- Provisioned new development environments for SaaS applications in AWS EKS, utilizing an automated ArgoCD GitOps pipeline.
- Handled **on-call** monitoring for lower environments for 80+ microservices leveraging RAG tool assistance.

Amadeus Bengaluru, India

Software Engineer 2 (Devops) *May 2023 – October 2024*

- Automated distributed NoSQL cluster deployments on **Azure (IaaS) with terraform (IaC) and ansible tools** that is used to provide clusters for 100+ application teams following **agile** methodology (SAFe).
- Designed and implemented password rotation strategy for automated rotation of NoSQL clusters user credentials with cronjobs implemented on **Openshift with Helm** ensuring zero alerts.
- Introduced **Microsoft AAD based SSO using JWT tokens in a containerized Go web application built on Gin framework** hosted on OpenShift on top of Azure.

Software Engineer *August 2021 – April 2023*

- Implemented **Azure Disk Encryption, Private endpoints** on azure clusters to achieve encryption at rest and provide secure network boundaries.
- Improved upon **Azure VM proximity placement group strategy** to reduce quota issues by 20%.
- Developed an edge-compute mobile application prototype in **Flutter with a CDN backend** to successfully offload processing strain from central servers.

Software engineer intern *January 2021 – June 2021*

- Developed a PoC to study and compare between usage of CDN and Couchbase sync gateway for cache distribution with Android (Java) app acting as a mock travel application.

Sysveda Infotech Pvt. Ltd. Chennai, India

Software engineer intern *December 2019 – January 2020*

- Performed a case study and implemented an OCR module using machine learning models for text extraction from submitted ID documents of clients using python, evaluating and comparing with multiple Machine Learning models.

Skills

Languages: Python, Java, C++, Go

Technologies: Microsoft Azure, AWS, Ansible, Terraform, Docker, Kubernetes, Android, CDN, Git, Linux

Certifications: Azure fundamentals (AZ-900), OCI fundamentals, SAFe5 Agile Framework, Problem Solving with C - NPTEL, Machine Learning - Coursera, Introduction to NLP - Coursera, Data Visualization - Udemy

Projects

- **Grain Warehouse Management System**, IoT project aiming at automation of grain storage maintenance and distribution at silos while reducing wastage.
- **Intranet Revaluation Submission system**, A web portal for applying to revaluation of exam results aimed at reducing paperwork.
- **Real time captioning and summariser**, A speech to text system with web interface to convert lectures to text real-time and provide a summary of the same at the end.

Education

SSN College of Engineering | Chennai, India *August 2017 – May 2021*

Bachelor of Engineering in Computer Science and Engineering ***GPA: 8.58/10.0***

SRDF Vivekananda Vidhyalaya | Chennai,India *April 2015 – May 2017*

Higher Secondary ***Percentage: 96.66***
